Your comfort

If you treasure your comfort, if you enjoy elegance and simplicity, there's a solution just for you. The Perfect Climate Comfort Center™, the award-winning temperature and air-quality control system.

What's more, you can enjoy greater peace of mind when you're away. That's because the Comfort Center lets you stay connected for worry-free control of your home's indoor climate.

Exceptional comfort

Now everything to do with your personal comfort—temperature, humidity, fresh air ventilation, air circulation and air filtration—can be managed from your Comfort Center. That's comfort, pure and simple.

The perfect temperature

The most advanced thermostat

Enjoy superior comfort with the Comfort Center. No thermostat is more accurate.

- **So sensitive.** It controls the temperature to within 1°F of the setting. (The smallest temperature change most people can detect is 2°F.)
- **Super smart.** Artificial intelligence keeps you comfortable year-round.
- **Saves energy.** You can automatically save energy when you're away or asleep—up to 30% on annual heating and cooling costs.

Comfort zone

Are areas of your home too hot? Too cold? Ask your contractor about a temperature zoning system. A zoning system delivers heating or cooling as needed to *individual* areas. This gives you the comfort you want, where you want it.

Just-right humidity

In the winter, air that's too dry can take a toll on your family. Your home, your woodwork and furnishings can suffer, too.

In the warmer months, air that's too moist can foster the growth of mold and mildew.

Enter the Comfort Center. It controls your home comfort equipment—signaling it when humidification or dehumidification is needed. You enjoy the comfort.

Away from home?

Now you can enjoy added peace of mind when you're away. Your Comfort Center lets you stay connected.*

- *Just pick up a phone.* Check—or change—your home's temperature and other indoor climate settings. Save energy when you're away. Call ahead so your home is at a comfortable temperature when you arrive.
- *Get phone alerts* in case of heating/cooling problems. So you can get them fixed early on.

Consumer tested for ease of use

Fresh air ventilation

Today's tightly built homes allow little fresh air to get in or stale air to get out. Unfortunately, that means odors can linger and pollutants can build up inside.

The good news is, the Comfort Center can help. It controls your home ventilation equipment—scooping in fresher outdoor air, exhausting stale air—on the schedule you determine. So you breathe fresher air indoors year-round.

Circulate and filter the air

Stuffy air? Excessive temperature variations between different levels of your home? The Comfort Center can help. It can run your heating/cooling system fan to circulate air on schedule.

Bonus: If your home has a whole-house air cleaner, you'll enjoy fresher, filtered air whenever the system fan runs.

Where you want

Conventional thermostats must be installed in a central location. Not so with the Comfort Center. Locate it where *you* want it.**

Easy comfort

Indicator lights show your equipment running and when service is needed

Large, continuous backlit display is easy to read, even in the dark

Check the outdoor temperature*** and other readings

Programmable fan offers increased ventilation and air quality

Preset with an energy-saving schedule to fit many lifestyles. Or customize in moments

Programmable hold saves energy when you're away on longer trips

Control a humidifier (winter) or an air conditioner (summer) for optimal humidity indoors

Control a ventilation system to bring in fresher, outdoor air

**Requires optional sensor

***Requires optional outdoor sensor

THEN: Clutter

Separate controls for temperature, ventilation, air cleaning and humidity

NOW: Comfort Center

Seamless control of your home comfort appliances

Customized comfort for you

The Perfect Climate Comfort Center gives you elegant, intelligent control of your home comfort system. Your professional heating/cooling contractor can help you choose the comfort system components that maximize comfort for you and your family.

High-efficiency heating equipment

Choose a unit with a high-energy efficiency rating—good for your pocketbook and the environment

High-efficiency air conditioner

Consider units with two-stage cooling for optimal dehumidification in the summer

Whole-house humidifier

Moisturize dry air to optimize humidity for your home and health

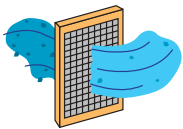

Perfect Window® Air Exchanger

Ventilate your home to assure fresh air while minimizing energy loss

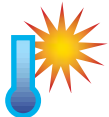

Ultraviolet air treatment system

Zap airborne germs and prevent mold spore growth on air-conditioning coils

Whole-house air cleaner

Trap a high percentage of airborne particles from the air passing through it

Temperature zoning system

Control temperature by area in your home, saving energy and improving comfort

Communications

Get added peace of mind and comfort through remote control and alerts of system problems****
